### DoD Broad Agency Announcement (BAA) Grant

- Department of Defense (BAA \$3,979,380)
- PI: Brian Eastridge, MD  
 Professor, Department of Surgery  
 Division Chief, Trauma and Emergency General Surgery  
 Jocelyn and Joe Straus Endowed Chair in Trauma Research  
 University of Texas Health Science Center at San Antonio
- Co-PIs: Kurt Nolte, MD  
 Professor of Pathology  
 University of New Mexico  
 Director of Radiology-Pathology Center for Forensic Imaging  
 Chief Medical Investigator, Office of the Medical Investigator
- Ellen MacKenzie, PhD  
 Dean, Johns Hopkins Bloomberg School of Public Health  
 Bloomberg Distinguished Professor

### Background/Scientific Rationale Pre-Hospital Mortality Combat

#### Where Can We Save the Most Lives?

Category	Count
Potentially Survivable	3543
Pre-MTP Deaths	277
MTP Deaths	277

#### What were the Causes of Preventable Death?

Cause	Percentage	Count
Hemorrhage	91%	(n=819)
Airway Obstruction	7.9%	(n=77)
Tension/Pneumothorax	1.1%	(n=11)
Physiologic Cause	1.1%	(n=11)

Eastridge BJ, Makin RL, Seguin PG, et al. Death on the battlefield (2002-2011): implications for the future of combat casualty care. *Journal of Trauma* 2012; 73(6):1402-7.  
 Eastridge BJ, Henderson Campbell LA, et al. Study of wounds on the battlefield: causation and implications for improving combat casualty care. *Journal of Trauma* 2011; 71(4):114-8.

---

---

---

---

7

---

---

---

---

---

---

---

---

### Why is the MIMIC study unique?

- It replicates what other small studies have done.
- Provides a multi-disciplinary review team with granular injury details to determine survivability.
- Allows reviewers to determine survivability.
- Utilizes death data from autopsy reports to determine survivability.
- The MIMIC study is the only study that has examined pre-hospital trauma deaths to determine ways to improve outcomes.

Medrano NW, Villarreal CL, Price MA, et al. Multi-Institutional Multi-Disciplinary Injury Mortality Investigation in the Civilian Pre-hospital Environment (MIMIC). Trauma Surgery and Acute Care Open. 2019.

8

---

---

---

---

---

---

---

---

### Study Hypotheses

- Substantial opportunity to further reduce deaths in pre-hospital setting.
  - Potential liabilities in civilian and military pre-hospital care must be identified and remediated in order to reduce the number of potentially preventable deaths on the battlefield and in the civilian environment.

9

---

---

---

---

---

---

---

---

### MIMIC Objectives

- **Objective #1:** *Develop a framework and methodology* for evaluating pre-hospital deaths
- **Objective #2:** Organize and standardize a *multidisciplinary, multi-institutional network of experts* to identify the causes of pre-hospital deaths due to trauma and estimate the potential for survivability.
- **Objective #3:** *Define the causes and pathophysiologic mechanisms of 3,000 pre-hospital deaths*, and estimate the potential for survivability
- **Objective #4:** *Describe the epidemiology of pre-hospital mortality* in the context of trauma system development and estimate its impact on society.
- **Objective #5:** *Develop a blueprint for a sustained effort* identifying high priority areas for injury prevention, trauma systems performance improvement and research and development.

---

### System Benefits

<p><b>Trauma</b></p> <ul style="list-style-type: none"> <li>• Performance improvement             <ul style="list-style-type: none"> <li>• Engineering</li> <li>• Medical devices / procedures</li> <li>• EMS value validation</li> <li>• Injury Prevention</li> <li>• Collaboration between trauma and ME communities</li> </ul> </li> </ul>	<p><b>Medical Examiner</b></p> <ul style="list-style-type: none"> <li>• Funding for advanced radiological imaging</li> <li>• Improve mechanistic information</li> <li>• Interaction between trauma and ME communities</li> <li>• Bridge the gap between ME and TS data sets</li> </ul>
---	--

11

---

---

---

---

---

---

---

---

### Study Population

- **Inclusion Criteria:**
  1. Pre-hospital deaths ( at scene, en route to hospital or DOA defined as no vitals upon arrival at hospital)
  2. Blunt, Penetrating, Thermal, and Suicides are included
- **Exclusion Criteria:**
  1. Non-mechanical causes of death – poisoning, drug overdoses, hangings, drowning (unless associated with trauma)
  2. Decomposed remains only (not fully fleshed with distinguishable organs)

12

---

---

---

---

---

---

---

---

## Forensic Record

Medical Examiner cases may involve any of the following:

- External examination
- Internal examination
- Investigator reports
- Toxicology Report
- Radiographs- CT Reports will be uploaded. Actual images will be uploaded if available and when a case requires adjudication.

---

---

---

---

---

---

---

---

13

## Study Setting Six Regions in the Country

(Centralized ME systems and utilizing electronic case management system to collect uniform data on all deaths)

1. **State of Connecticut.** Serves a population of 3.6 million. They perform approximately 2,200 autopsy examinations at a single, centralized facility annually.
2. **Johnson County, Iowa.** Serves a population of 142,000. In 2014 JCME accepted jurisdiction of 380 deaths and performed 118 autopsies.
3. **State of Maryland.** Serves a population of approximately 6.0 million residents. They perform 4,220 autopsies at the single, centralized facility annually.
4. **State of New Mexico.** Serves a population of 2.0 million. They perform approximately 2,100 full autopsy examinations annually.
5. **State of Oklahoma.** Serves a population of 3.8 million and conducts investigation of roughly 4,000 deaths annually.
6. **The District of Columbia.** Serves a population of 659,000. They perform approximately 1,110 examinations annually.

---

---

---

---

---

---

---

---

---

### Case Review Methods

- Steering Committee (Military and Civilian) defined definitions and process
- Expert review panels (~ 80 Military and Civilian reviewers) (6 individuals are on each panel)
  - 4 Surgeons
  - 1 Emergency Medicine/EMS
  - 1 Forensic Reviewer
- Panels will each review a certain number of cases using the **PROFILER** and assign a determination of survivability to each case
- Reviewers will review cases independently. Throughout the course of the study approximately **250 cases** will be reviewed by each team panel.
- Discrepancies in determination of survivability will be identified and non-consensus will be reviewed by an adjudication team

17

---

---

---

---

---

---

---

---

---

18

---

---

---

---

---

---

---

---

---

---

## Survivability Definitions

19

---

---

---

---

---

---

---

---

## Survivability Definitions

- **Non-Survivable**- Death as a result of catastrophic anatomic injuries
- **Possibly Survivable** - Anatomic injuries that were severe but medically survivable
- **Definitely Survivable**- Minimal anatomic injuries with a high likelihood of survival
- **Cannot Judge**- information insufficient to make a determination

20

---

---

---

---

---

---

---

---

## Anatomic Survivability

<p><b>Medically Non-Survivable (MNS)</b></p> <ul style="list-style-type: none"> <li>• Dismemberment / decapitation</li> <li>• Traumatic Brain evisceration</li> <li>• Cervical cord transection (above C3)</li> <li>• Airway transection within thorax</li> <li>• Cardiac injury &gt; 2cm</li> <li>• Uncontained hemorrhage, thoracic aorta</li> <li>• Uncontained hemorrhage, pulmonary artery</li> <li>• Hepatic avulsion</li> <li>• Junctional lower extremity amputations with open pelvis</li> <li>• Injuries to the deep CNS nuclei, brainstem, or massive brain tissue injury</li> <li>• Massive Pulmonary Tissue Disruption</li> </ul>	<p><b>Medically Potentially Survivable / Definitely Survivable</b></p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <ul style="list-style-type: none"> <li>• All other</li> </ul> </div>

### Causation and Survival Determination

What contributed to the death?

Destination from Scene: OCHME (Office of the Chief Medical Examiner)

**EMS CARE**  
EMS was not involved in this case.

**ACCESS TO EMS & TRAUMA CARE**  
Despite what actually occurred in this case, this table shows the estimated time and distance from the closest EMS facility to the location of the patient.

EMSGROUND DISTANCE (miles)	EMSGROUND TIME (minutes)	EMSLAR DISTANCE (miles)	EMSLAR TIME (minutes)
4	12	9	7

Despite what actually occurred in this case, this table shows estimated time and distance to the closest trauma center from the time EMS dispatch receives the call to the patient's arrival at the trauma center. These distances and times were calculated based on the location of this patient.

CLOSEST TRAUMA CENTER	EMSGROUND DISTANCE (miles)	EMSGROUND TIME (minutes)	EMSLAR DISTANCE (miles)	EMSLAR TIME (minutes)
HVH1	22	56	22	34
LVH1	19	51	19	33
LVH3	42	86	52	47
UNLAWYER HOSPITAL	0	0	0	0

**Select the combination of all actual causes or conditions that likely occurred, what contributed to the death (and how much each contribute, very little, some, a lot)**

- Lack of field interventions by law enforcement
- Lack of field interventions by responder
- Access to regional trauma center > 30 minute transport
- Timeliness of discovery
- Delay secondary to tactical response
- Lack of specialized responders (high angle, swift water, etc.)
- Lack of resources
- Failure of preparedness
- Other

**Select the combination of all actual causes or conditions that likely occurred, what contributed to the death (and how much each contribute, very little, some, a lot)**

- Mechanical failure
- Safety device failure
- Safety device not used
- Automatic crash identification systems
- Other

**Select the combination of all actual causes or conditions that likely occurred, what contributed to the death (and how much each contribute, very little, some, a lot)**

- Concomitant physical conditions
- Concomitant behavioral health conditions
- Intoxication - Alcohol
- Intoxication - Drugs

34

---

---

---

---

### Causation and Survival Determination

- Rationale for how you made your determination; may help if adjudication is needed

Is there information missing about this case that might impact your judgment about survivability?

- EMS Record
- Complete autopsy
- Time Parameters
- Other

Are there other factors that influenced your judgment? Please specify.

→ SUBMIT

35

---

---

---

---

---

---

---

---

---

---

### Causation and Survival Determination

- Submission is final, unless adjudication is needed

Is there information missing about this case that might impact your judgment about survivability?

- EMS Record
- Complete autopsy
- Time Parameters
- Other

Are there other factors that influenced your judgment? Please specify.

→ SUBMIT

36

---

---

---

---

---

---

---

---

---

---

## Preliminary Data

37

---

---

---

---

---

---

---

---

### Case Reviews

Study Round	Number of Cases Released	Case Completion
<b>Round 1 Status</b> <small>Began 1-16-2019</small>	260 Cases Released	240 Cases Completed
<b>Round 2 Status</b> <small>Began 3-15-2019</small>	240 Cases Released	240 Cases Completed
<b>Round 3 Status</b> <small>Began 6-13-2019</small>	300 Cases Released	150 Cases Completed

- 13 review team panels
- Study will consist of 10 rounds
- Reviewers are reporting being able to complete each case review in about 10-15 minutes

38

---

---

---

---

---

---

---

---

### Questions Used to Determine Consensus

- Consensus must be reached on both Survivability Questions:
  - Assume the survival status of this patient is unknown, **with immediate access to care at a level I trauma center**, assess the survival potential of this patient.
  - Assume the survival status of this patient is unknown, **given the conditions of the actual scenario** in which the injury occurred (i.e. discovery, EMS response, access to trauma center, weather etc.), assess the survival potential of this patient.

39

---

---

---

---

---

---

---

---

### Case Consensus Definition

- 5 reviewers are used to determine consensus. The ME/Forensic reviewer is not calculated in consensus as this analysis is kept separate.
- Each variable is independent. So it must be 3 or more reviewers answering the same on one specific category. (For example: 3 agree the case is Potentially Survivable)
  - If one reviewer selects non-survivable and the other 4 select either potentially, definitely survivable, or cannot judge, that case goes to adjudication
  - If two reviewers select cannot judge, but the other three are able to make a determination, the case goes to adjudication

---

---

---

---

---

---

---

---

40

### Case Adjudication

Study Round	Number of Cases That Did Not Reach Initial Consensus	Cases Resolved During Team Adjudication	Cases Still In Team Adjudication	Could Not Reach Consensus, Pushed for Outside Adjudication
Round 1 Status	61 cases	44 cases	3 cases	14 cases
Round 2 Status	49 cases	21 cases	20 cases	8 cases
Round 3 Status	36 cases	9 cases	24 cases	3 cases

---

---

---

---

---

---

---

---

41

### Preliminary Round 1 and Round 2 Data

- Q1: Based on your judgment, what was the principal mechanism(s) of death?

Principal Mechanism(s) of Death	Frequency
Neurological – Traumatic Brain Injury	1342
Hemorrhage – Truncal: Thorax	354
Neurological – Spinal Cord	256
Hemorrhage – Truncal: Abdomen / Pelvis	136
Burn	133
Airway	79
Massive tissue disruption: CNS	67
Asphyxia	65
Massive tissue disruption: Whole Body	59
Massive tissue disruption: Thorax	41
Tension Pneumothorax	32
Hemorrhage – Junctional: Cervical	29
Massive tissue disruption: abdomen	28
hemorrhage - peripheral: upper extremity	21

*Note: Cases with multiple causes are counted multiple times. (Round 1 and 2)*

---

---

---

---

---

---

---

---

42

### Preliminary Round 1 and Round 2 Data

- Q2: Assume the survival status of this patient is unknown, with immediate access to care at a level I trauma center, assess the survival potential of this patient.

Immediate Access Survivability	Frequency for reviewers reaching consensus	Frequency for medical examiners
Non-survivable	262 (77%)	269 (79%)
Potentially Survivable	75 (22%)	46 (14%)
Definitely Survivable	2 (1%)	5 (1%)
Cannot Judge	0	19 (6%)

RESEARCH AND DEVELOPMENT OPPORTUNITIES TO INFORM INJURY PREVENTION

Note: Using 339 cases that have reached consensus on survivability assessments for Q2

43

---

---

---

---

---

---

---

---

---

---

### Preliminary Round 1 and Round 2 Data

- Q3: Assume the survival status of this patient is unknown, given the conditions of the actual scenario in which the injury occurred (i.e. discovery, EMS response, access to trauma center, weather etc.), assess the survival potential of this patient

Actual Scenario Survivability	Frequency for reviewers reaching consensus	Frequency for medical examiners
Non-survivable	341 (93%)	325 (89%)
Potentially Survivable	26 (7%)	22 (6%)
Definitely Survivable	0	0
Cannot Judge	0	20 (5%)

OPPORTUNITIES TO IMPROVE CURRENT TRAUMA SYSTEM

Note: Using 367 cases that have reached consensus on survivability assessments

44

---

---

---

---

---

---

---

---

---

---

Immediate Access Survivability	Frequency for reviewers reaching consensus	Frequency for medical examiners
Non-survivable	262 (77%)	269 (79%)
Potentially Survivable	75 (22%)	46 (14%)
Definitely Survivable	2 (1%)	5 (1%)
Cannot Judge	0	19 (6%)

Actual Scenario Survivability	Frequency for reviewers reaching consensus	Frequency for medical examiners
Non-survivable	341 (93%)	325 (89%)
Potentially Survivable	26 (7%)	22 (6%)
Definitely Survivable	0	0
Cannot Judge	0	20 (5%)

RESEARCH AND DEVELOPMENT OPPORTUNITIES TO IMPROVE FUTURE TRAUMA SYSTEMS

45

---

---

---

---

---

---

---

---

---

---

## Preliminary Round 1 and Round 2 Data

- Q4: Which injury prevention programs/devices or interventions might have improved the chances of survival for this individual?

Prevention Program(s)	Frequency
Behavioral health	777
Alcohol / drug	469
Seat belt	149
Airbag	55
Helmet	34
Child Restraint	5
Protective Clothing	5
Personal Flotation Device	4

*Note: Using records from all reviewers in Round 1 and Round 2.*

---

---

---

---

---

---

---

---

---

---

46

## Questions

---

---

---

---

---

---

---

---

---

---

47

## Summary

The goal of the research is to identify liabilities in trauma systems and develop mitigation strategies with translation potential for realistic and relevant improvements in trauma systems and medical examiner systems. The research intends to identify ways that the ME and trauma communities can improve linkages to foster in-depth reviews of trauma mortality.

---

---

---

---

---

---

---

---

---

---

48

## Future Directions

- Submission of an NIH R-24 award to fund a PEDS-MIMIC project
- Looking for funding opportunities aimed at building the ME system
- Exploring funding opportunities that focus on suicides

49

---

---

---

---

---

---

---

---

## Team Acknowledgment

- Authors: Villarreal CL, Medrano NW, MacKenzie E, Nolte KB, Phillips MJ, Price MA, Eastridge BJ
- MIMIC Steering Committee
- MIMIC Forensic Reviewers
  - Kurt Nolte, Edward Mazuchowski, Roger Mitchell, Stacy Drake, Marcus Nashelsky, David Fowler, Greg Davis, James Gill, Joseph Hunt
